Wizdom Room

Turning Ideas Into Innovation

TECHNOLOGY FOR THE *DYNAMIC* BUSINESS

What does Wizdom Room do ?

Wizdom Room provides a perfect environment for online training and gives a feel of being in the classroom itself.

This solution can help you in your quest to provide effective training at low cost to your employees. Wizdom Room integrates the best learning practices with the power of Internet to provide a dynamic learning platform to the learner.

But how....??

Lets look at various features of Wizdom Room and how you can integrate it with your learning strategy

A LEARNING SOLUTION THAT'S HOLISTIC (NOT FULL OF HOLES)

There's very little doubt that when compared to the conventional means of training, e-learning has innumerable advantages. The most important of which are the savings of time and cost. The mantra is:

**"Getting the Right Information.
To the Right User. At the Right
Time"**

With training solutions that enable your employees to learn in the office or on the move, e-learning is fast becoming the ideal choice for the convenient learning process of today.

But the e-learning courses as we know them, lack two very fundamental features of the conventional classroom course –

- No interaction between teachers and students.
- No sense of peer pressure.

Lack of these features prevents e-learning from becoming a complete learning experience. This is where **Wizdom Room** comes in.

Wizdom Room has all the advantages of the conventional e-learning plus it's live.

It gives you the power to learn live via the Internet. Advantages of Wizdom Room are:

- Reduce training travel, facilities and communication costs.
- Deliver online training in a format that replicates typical classroom interaction.
- Record training sessions for later use to leverage value.
- Empower employees to share knowledge with each other as subject experts.
- Provide users with the access to the comprehensive knowledge repository.

How does Wizdom Room work -

- Using our web based interactive wizard schedule a session and add students who would attend the session. The mails will automatically go to all the students who have been invited.
- On the appointed time, you can launch the session, and students would join the session from their college/home/office by simply clicking on 'Launch Session' link. There is no need to download any software prior to joining the meeting.
- Once a session starts, live session can be shown to all the students using our Video tool. Video size is easily configurable and can be set as twice the size of what is shown here. Pre-recorded video can also be shared with the users.
- You can also talk to students and interact with them to solve their queries using the Audio tool.

Other interesting features are -

- Students can also interact with each other and the mentors with help of chat tool. Mentors can answer all the queries of the students over here.
- Another feature of the software is whiteboard – which can be used to explain certain queries and also be used to draw diagrams etc, which can further clarify the doubts of trainees. PowerPoint presentations, image files, PDF files etc can also be uploaded on the whiteboard – thus if you already have some study material then it can be easily plugged into Wizdom Room.
- Poll is another interesting feature, with the help of which the asst. surgeon can conduct polls on the fly and can know the opinion of the trainees on any particular matter.

One of the best feature of the software is that the entire session is recorded on the server.

Thus, a student according to his convenience come to the website and attend the session – audio, video, Whiteboard and chat interactions are all recorded in the central database for future reference.

All the sessions are completely indexed and thus can prove to be a very useful library

FEATURES AND BENEFITS OF Wizdom Room

FEATURES	ADVANTAGES
