

**VR BASED LEARNING AT THE PRICE OF AN E-LEARNING COURSE.**

**E-LEARNING COURSE.**

Have you always aspired to include Virtual Reality in your learning design but held back due to budgetary constraints? Well, there's good news for you. We offer VR-based learning experience at a **REASONABLE BUDGET**.

**Types of VR experiences**

• **Type 1: 360° VR**

Imagine a VR-based immersive experience where you can look at various objects or people and even interact with them using a pointing device. That's 360°VR for you.

Learners can just move their head left, right, up, down, and even behind and feel like they are part of a 3-dimensional environment. These tools provide all basic environments and corresponding assets to develop the experience. As learning experts, we use our expertise to make the best use of these assets and develop an unforgettable educational experience.

• **Type 2: Full VR**

It is an extremely immersive experience. Learners can experience 6-dimensional freedom in a 3-D experience. They can not only move their head but can also move closer to objects and people. Use a controller gloves or hand-held device to manipulate objects and people.

**Resources required to develop and implement VR Learning Solutions**

**Software to develop a virtual world**

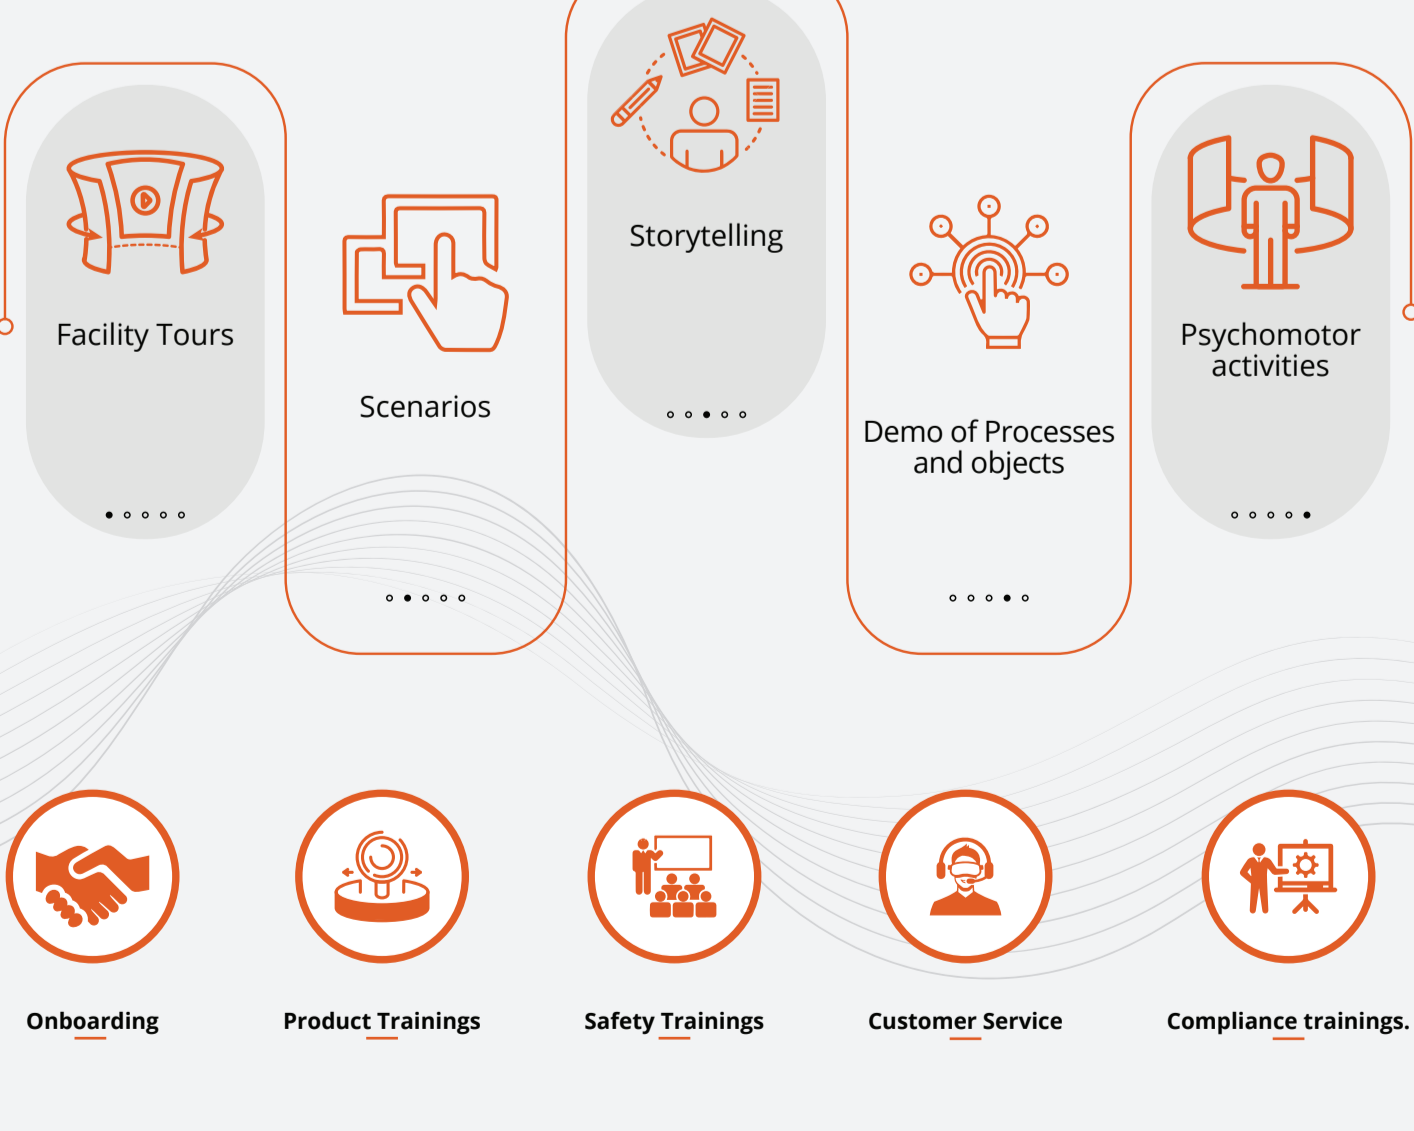

**VR development experts**

**VR Hardware**

The software, the hardware and the experts determine **The cost of the VR experience**

A full VR is obviously the best a learner can get but it is immensely costly for now. A 360° VR solution is developed using 360° videos and images, and other 3D/2D assets and offers a great immersive experience. As per the high demand for VR experience in training, various eLearning authoring tools have developed features to build 360° VR solutions using videos and images and pre-build assets like templates, interactivities and 3D objects
